

COLUMBIA RIVER TREATY

Columbia Basin

Community Interests

Nakusp June 21, 2018

Common Interests Across the Basin

Ecosystems

- Wildlife and vegetation, fish and aquatic resources and sustainability - including food security
- Different concerns for each region/reservoir area
- Most felt it should be a 3rd component of the Treaty
- Active adaptive management is essential
- Include adaptation to climate change

Common Interests Across the Basin

Salmon Restoration

- Key issue raised in community discussions, in particular with First Nations
- Efforts to explore feasibility happening on both sides of the border
- First Nations and Tribes are leading the initiative
- Columbia Basin Trust facilitating workshops, potential funding for Canadian efforts is being explored

Common Interests Across the Basin

Flood Risk Management

- Incidence and severity of flooding has been greatly reduced as a result of the Treaty
- High priority due to costs associated with flooding property and public infrastructure
- However ecosystems in BC should not be compromised to protect floodplain infrastructure
- Generally want to maintain current level of flood risk management

Common Interests Across the Basin

Libby Dam Coordination

- Better communication and cooperation between residents, local governments and the B.C. and U.S. Entities
- Kootenay system water management plan
- The above could improve:
 - flood risk to infrastructure in floodplains
 - impacts from river level fluctuations on diking infrastructure
 - impacts/benefits of the U.S. fertilization program
 - management of the Creston Valley Wildlife Management Area and surrounding wetlands

Common Interests Across the Basin

Power Generation and Canadian Entitlement

- Importance of GHG-free power generation
- Value of water management for power will decrease over time as the value of water for ecosystems, agriculture, water supply and other uses will increase
- Canadian Entitlement should include all the downstream benefits the U.S. receives, such as irrigation, recreation, navigation and endangered species
- Canadian Entitlement should address the impacted communities

Common Interests Across the Basin

Socio-Economic

- Community health - air quality impacts from dust storms
- Water levels for recreation and tourism
- Economic development - ferries, log transport and other commercial and industrial needs
- Water supply for agriculture, communities

Common Interests Across the Basin

Governance

- More inclusive and ongoing discussions on dams and reservoirs operations
- Local government engagement during negotiations with the U.S.
- Broader public involvement in the negotiation process
- Cross-border communication, including a Transboundary conference

Nakusp

- This area was the hardest hit with relatively little in return
- Need fair and equitable compensation for impacts
- Need better clean-up and debris removal from the lake/reservoir
- The reservoir needs to be as close to a natural system as possible, and include accommodation of white sturgeon

Nakusp

- Return of the salmon should be a priority
- Enhance the re-vegetation program
- Wetlands are not a priority here; there were no wetlands pre-Treaty like there were in Revelstoke
- Would like higher recreation water levels – 1440ft – for longer (June the Sept) and reduced fluctuation
- Would like stable mid-level reservoir elevation – 1420ft – to enhance ecosystems

Nakusp

- Low water levels make it hard to access water for irrigation and industry
- Better communications to the community in the event of extreme high water levels
- Need for a fixed link crossing at the North end of Upper Arrow Lake Reservoir – provides access and attracts people and industry
- Suggested that Economic Development, and Opportunity, Plans be drafted

Ministry of
Energy, Mines and
Petroleum Resources

Thank you
