Subject: BC Water Act

Our comment:

As for IPP's the law should distinguish between the small producers which use a few meters of a creek or a secluded waterfall for power production and the huge run of the river projects. It cannot be right that you need 54 forms to fill out for a water license and the permit to sell power to the grid!!!

The actual law makes it impossible for individuals, small businesses or remote places such as ours to realize "green power projects".
