Subject: Water Sustainability Act

In reading about the first in time system in place now and proposed to be increased I am puzzled as to why this is being favoured? The consideration must be given to the greatest good for the greatest number as well as safeguarding our provincial resources for future generations. Please ensure you have your very best minds on this issue and you have real experts in risk projection and management engaged in this process. Also please, companies like Nestles should be at the very bottom of the totem pole. The quick buck should be the last of our considerations.
Thank you
